

alpha laboratories

supplying quality to science

Alpha Laboratories supplies a wide range of consumables for in vitro laboratory use.

Please find below a selection of product ranges available.

If you would like to receive more information regarding these or other consumables or laboratory equipment, please do not hesitate to contact us using the details below.

Liquid Handling - Pipettes

Alpha Laboratories offers a wide variety of pipettes for all your liquid handling needs, ranging from Single- and Multichannel Pipettes to Serological Pipettes.

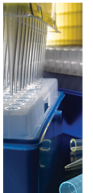

Some liquid handling tasks require specialist equipment. The Alpha laboratories line of dispensers covers a wide range of applications - from Pipet-Boys and bottle top dispensers for large volume delivery to high precision instruments for nanolitre injections.

Pipette Tips

Using high quality pipette tips ensures you get maximum performance and no interference in your assays.

The Alpha Laboratories tips are produced from the highest grade virgin polypropylene using computer-designed stainless steel moulds. The quality control process takes the tips through 92 checks from resin to final product to give you the quality reassurance you require.

There are tips available for most commonly used pipettes, such as Rainin, Eppendorf and Gilson.

Liquid Handling - Pastette

Available in over 50 designs, Pastettes are flexible, unbreakable, transfer or Pasteur pipettes. They are ideal for a multitude of tasks.

From quick and easy liquid transfers to precise control from small sample handling. Pastettes can be used for sampling from bottles or delivering to micro-cuvettes.

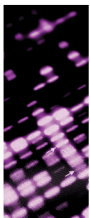

Whatever your application, a choice of known drop volumes and specific tip designs allow you to select the Pastette that exactly meets your needs.

Sample handling

The quality of analytical results can be very dependent upon how samples have been collected, transported, stored and processed, prior to being tested.

Using high quality consumables that maintain sample integrity, ensure no assay interference, prevent leakage and comply with transport regulations is essential.

The wide variety of sample tubes and containers includes cryogenic vials, designed for safe, ultra-low temperature storage, Fe-Col® Faecol Collection kits and SpeciSafe® mailing packs.

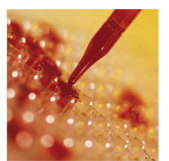

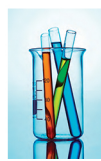

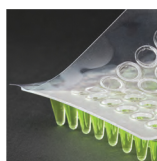

Laboratory Equipment - Electrophoresis

The Alpha Laboratories Clarit-E® range of innovative electrophoresis equipment continues to expand, providing you with a wide choice of tools to suit your separation needs.

Horizontal gel tanks in a variety of sizes offer the ultimate level of flexibility and the vertical modular systems, provide a complete solution of protein work.

Power supplies, gel documentation systems, blotting, plus more specialised equipment, enhance the range with the ability to support most applications.
