WHY PURITAN MEDICAL SWABS?

Puritan is a name known all over the world. We have built our **long-standing reputation** for **innovation** and **quality** by listening to our customers and meeting the evolving needs of the medical fields.

As always, Puritan responds to market needs with high-quality products. We have evolved alongside the healthcare field. Early in our history, the Puritan line was limited, primarily to tongue depressors and cotton tipped applicators. As medicine advanced, we kept pace, expanding our lines and even developing brand-new product categories and swabs for specialized medical applications.

The all-time Puritan best sellers shown above are time-tested examples. Look inside to see our standard product variety. And please remember, your feedback and custom orders are always welcome. The demands of the medical field are and will always be a driving force behind our R&D and our 100% commitment to consistent quality.

COTTON TIPPED APPLICATORS

We are very particular about our raw materials. For these applicators, we only use US-grown cotton. We coil and card our USP-grade cotton fiber in our factory and inspect every swab to ensure optimum quality and consistency.

PACKAGING QUANTITY CODES

Our packaging codes work from the outside in. The first number represents the outermost package – this may be a case, a box, or other container. Next is what you'll find when you open the outer packaging – bags, wrappers, tubes, etc. Finally we get to the heart of the packaging – how many swabs are grouped together. Some examples follow:

10/50 = 10 bags of 50 swabs per bag, per case.

10/10/100 = 10 boxes of 10 bags per case, 100 swabs per bag.

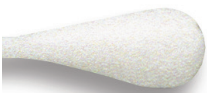

10/100/1 = 10 boxes of 100 swabs with each swab individually wrapped or in a tube.
